Networked Trade Platform

How does it help your business?

What is Singapore's Networked Trade Platform (NTP)?

One-stop trade information management system which connects businesses, community systems and platforms, and government systems

Document hub for digitisation at source that enables the reuse of data - cutting costs and streamlining processes

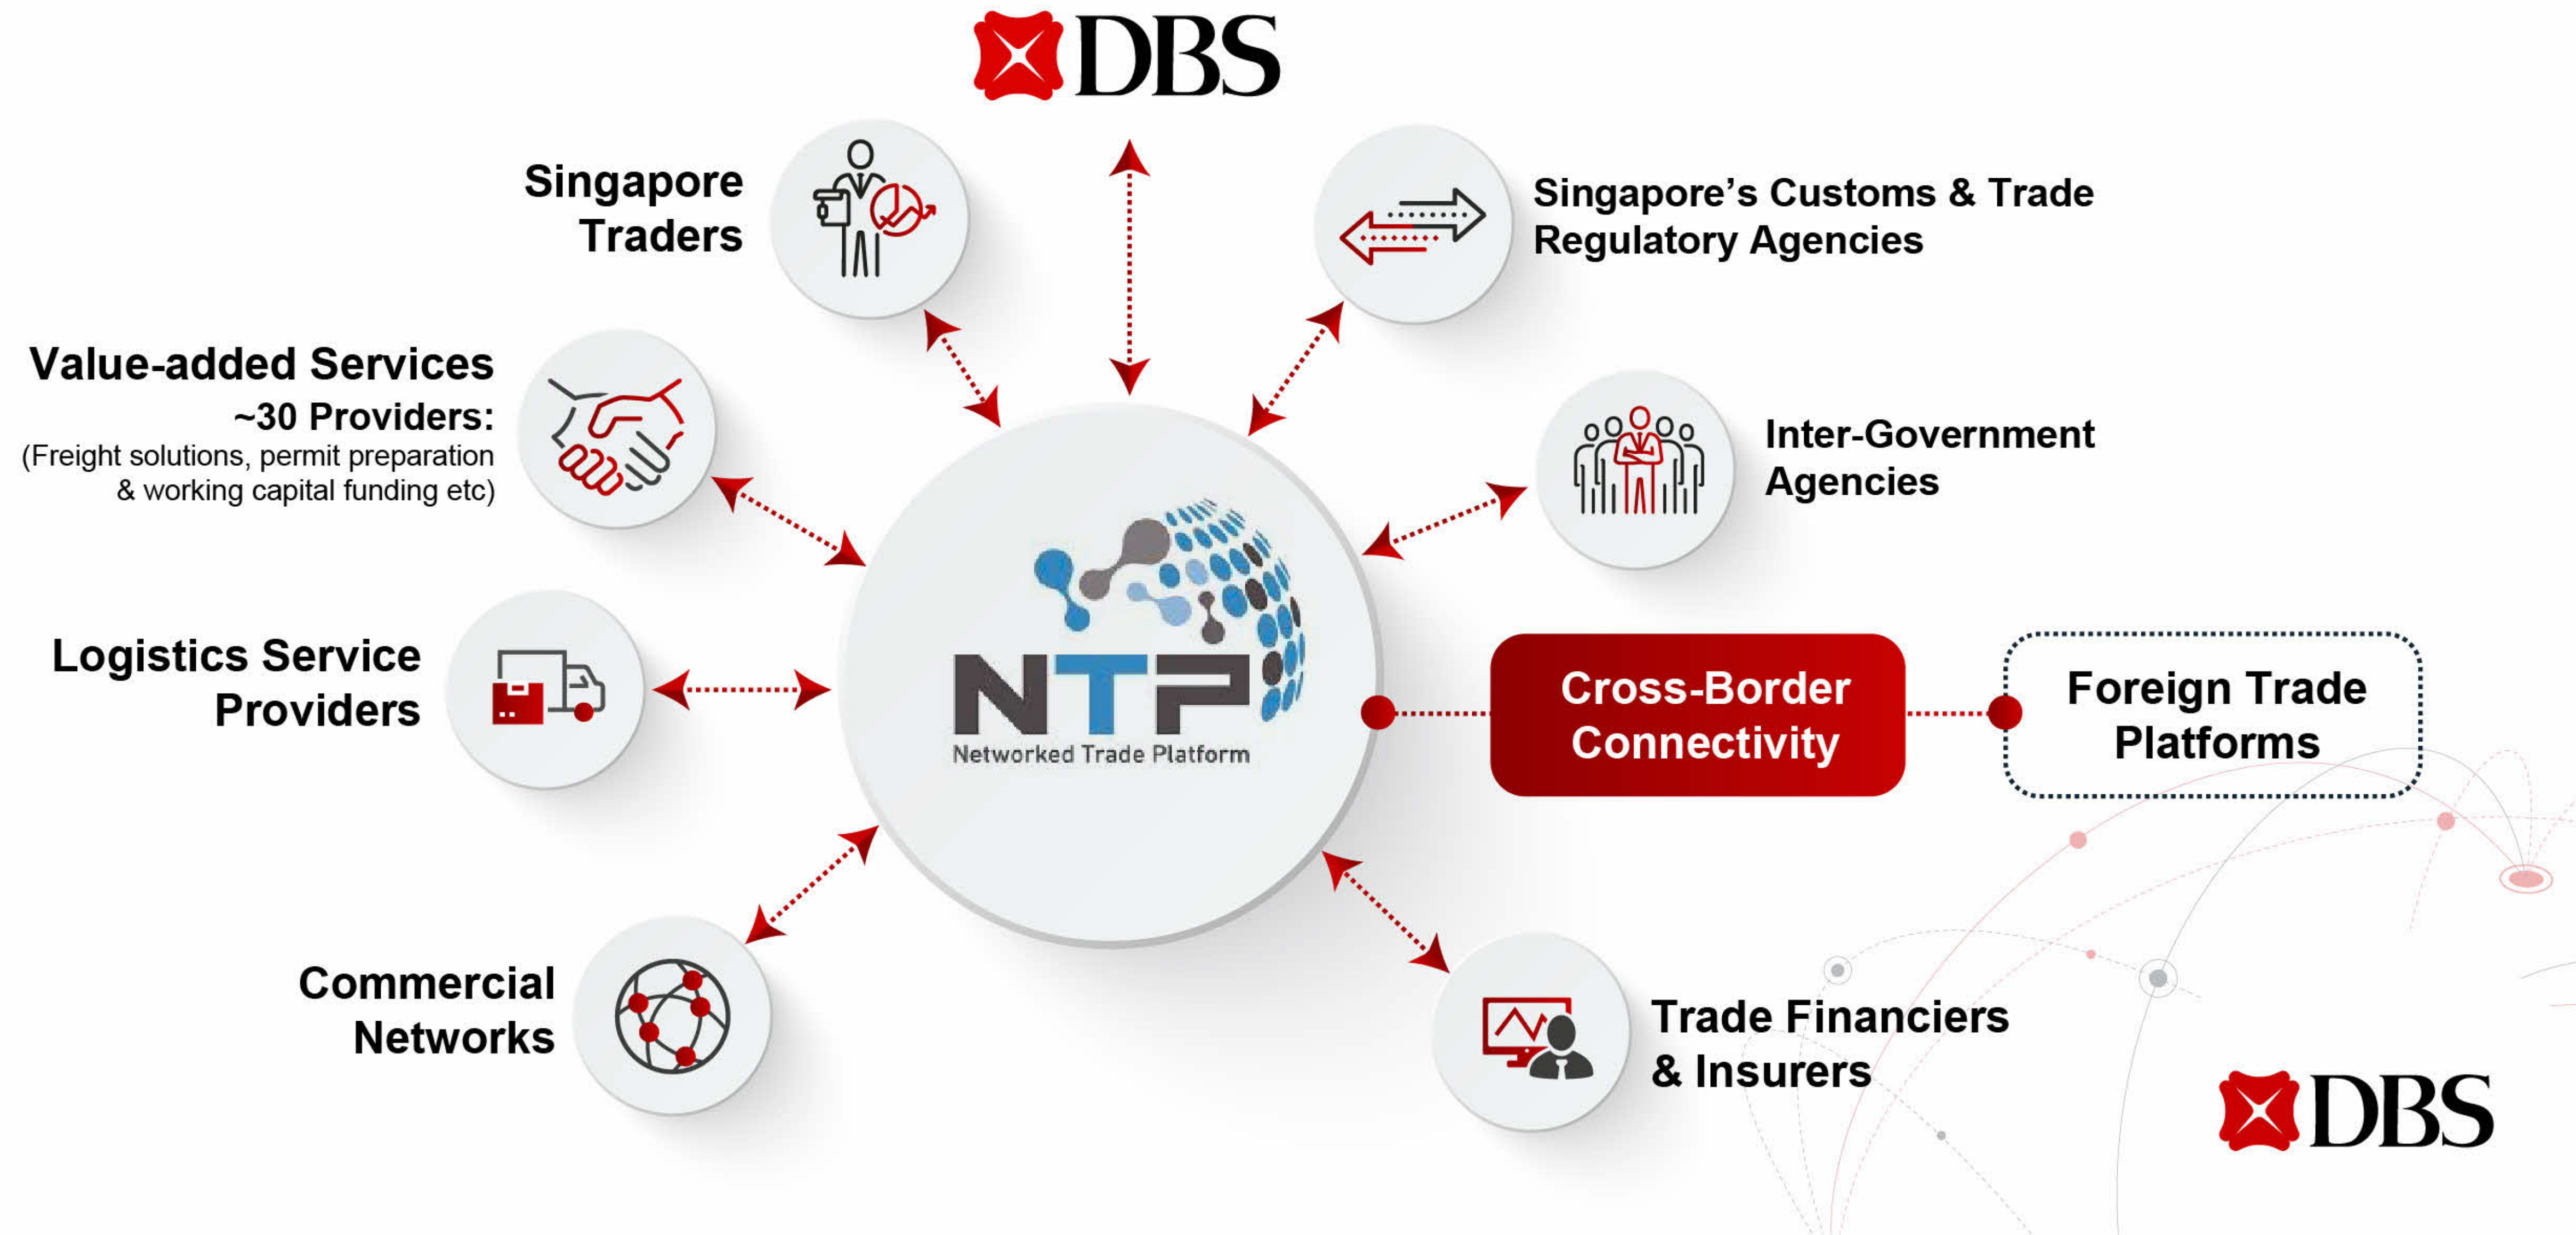

Next-generation open platform that offers a wide range of value-added trade-related services

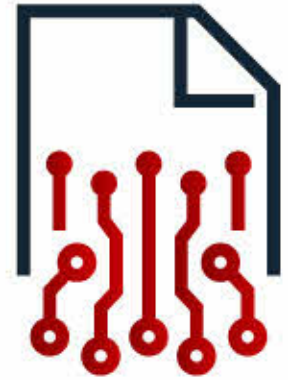

What is Singapore's Networked Trade Platform (NTP)?

Supporting trade digitalisation efforts and connecting players across the trade value chain

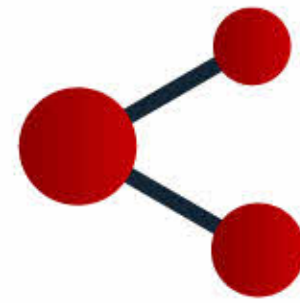

4 Key Features

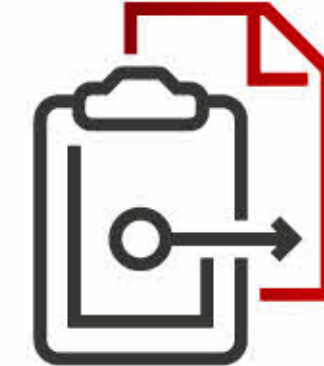

Manage

your documents and data digitally via the NTP's data repository

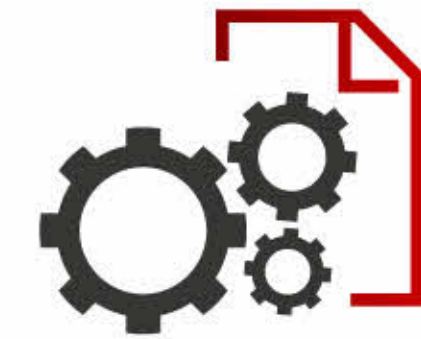

Share

your documents and data digitally with your chosen partners

Use

your stored digitised data for B2G and B2B transactions

Leverage

other value-added services to simplify your trade processes

How it helps you

- ▶ Easy to use and paperless
- ▶ Secured digital environment
- ▶ Enable data re-use for multiple purposes

- ▶ Less manual processes
- ▶ Faster connectivity with partners
- ▶ Improve operational efficiencies

- ▶ Enjoy integrated and faster access to government and business services
- ▶ Reduce redundancy, errors and speeds up processing time of your transactions

- ▶ Customisable tools and value-added services to suit your business needs

B2G: Business-to-Government
B2B: Business-to-Business

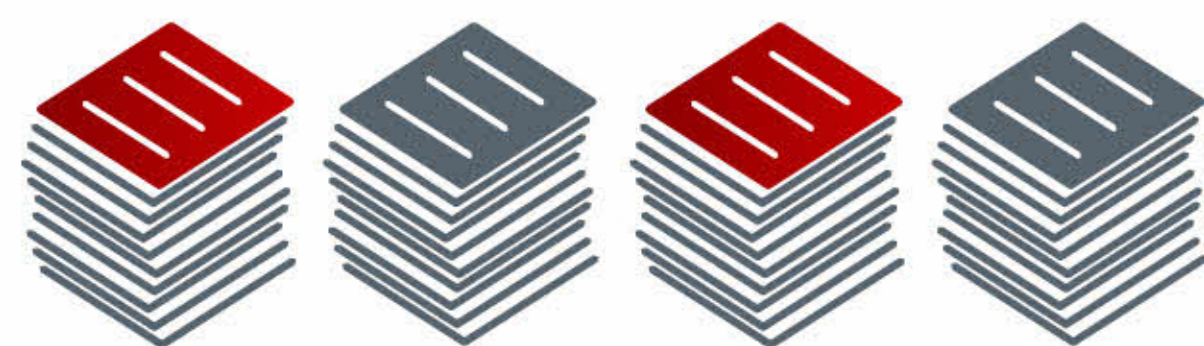

Manage

Manage documents and data in a digital repository

Traditional

Traditional trade processes involve resource and cost **intensive archival and storage of paper documents**.

Using NTP

Documents / data are **digitised via API into reusable form and stored securely on NTP**. You can also upload information into NTP manually.

Examples of document types supported on NTP:

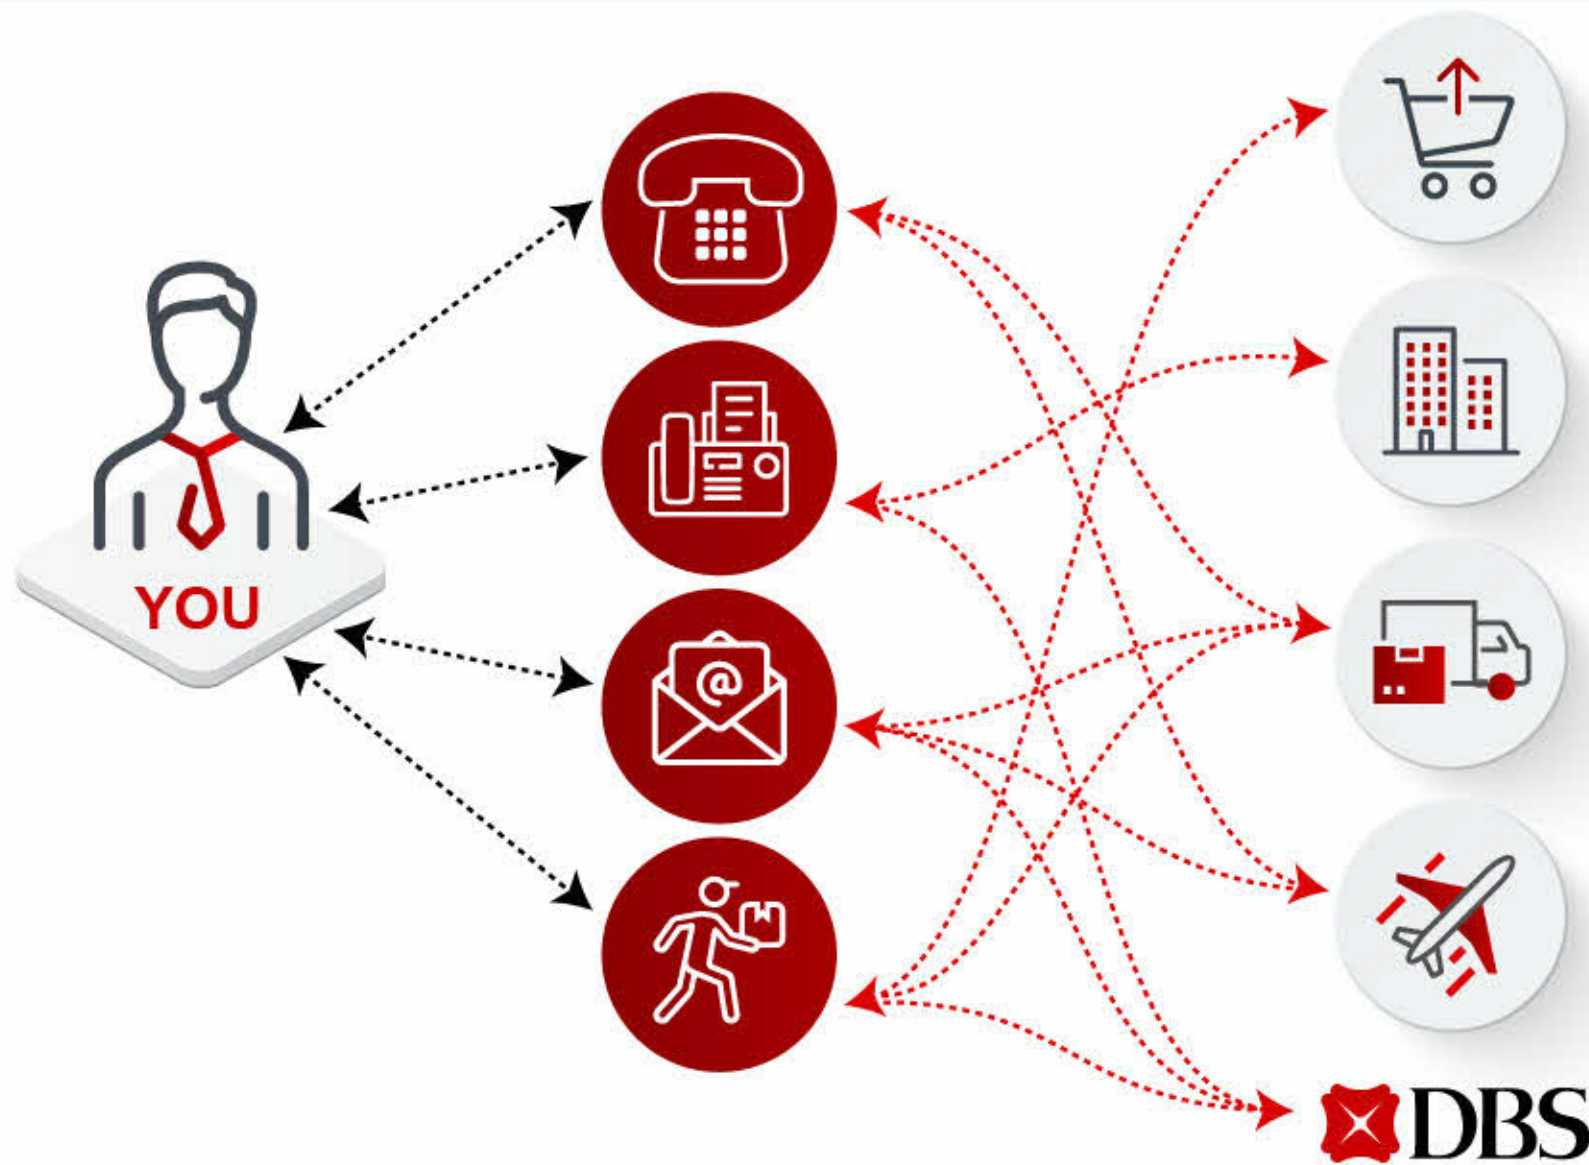

Purchase Order, Sales Order, Commercial Invoice, Packing List, Delivery Order, Shipment Detail Specs, Schedule of Credit, Schedule of Invoice

Share and Use

Share documents/data digitally and facilitate transactions

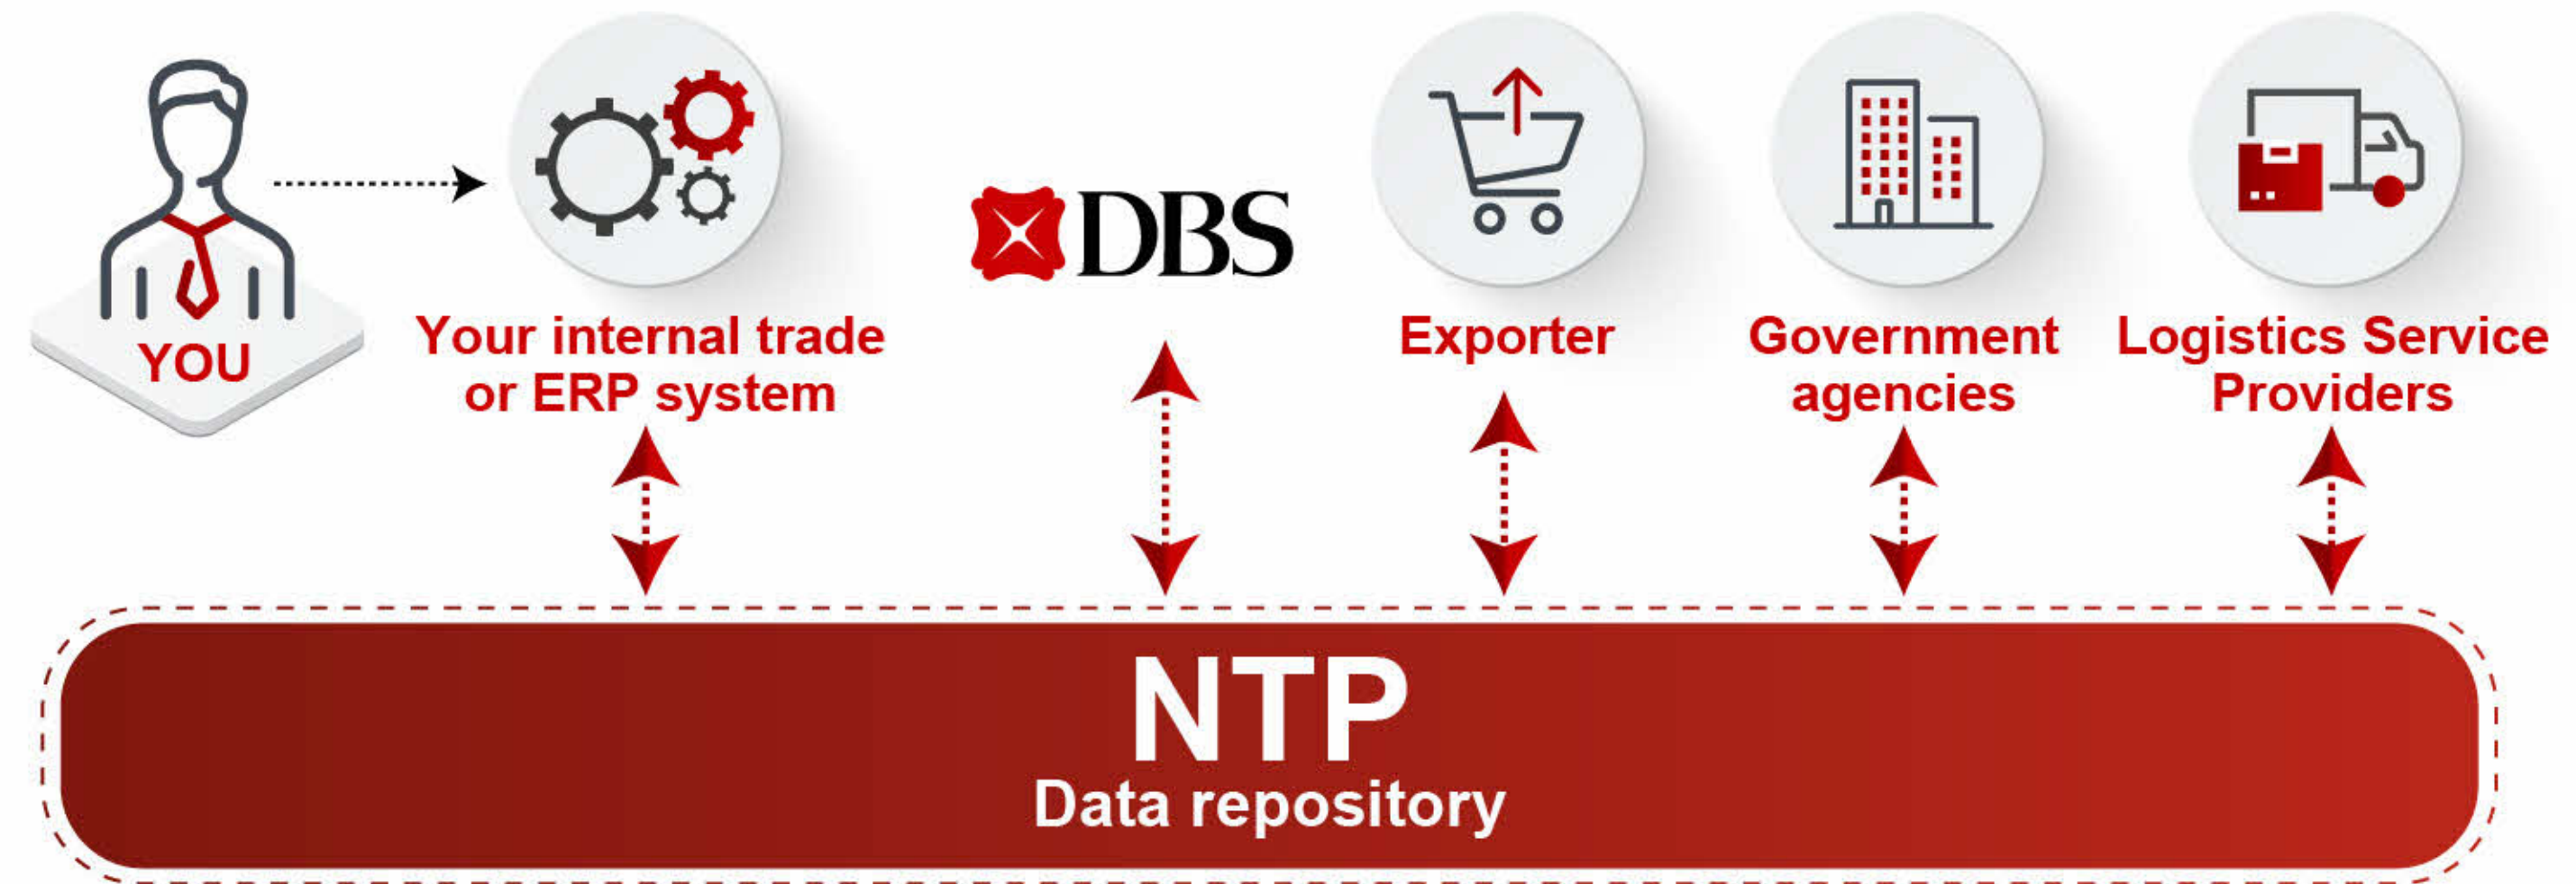

Traditional

Document sharing with multiple parties is largely **manual and inefficient** (through emails, courier etc).

Repeated data entry is made across multiple systems at different transaction points, leading to **higher risk of input error**.

Using NTP

Your digital documents / data can be easily and securely:

Shared with selected trade parties like DBS, **eliminating document transit time** and **improving operational efficiencies**.

Reused for various transactions with DBS such as trade financing applications, trade settlements etc, **reducing input errors** and **speeds up processing time**.

Leverage

Let DBS help you simplify your trade processes

1 Speak to **DBS** directly to customise a trade financing solution, which leverages your data on NTP

- Refer to Page 12 for an example on export document presentation for domestic letter of credit settlement

OR

Single window platform to facilitate end to end trade flow

How it works

Allows all trade parties to manage trade documents and trade financing needs all within the same secure NTP environment.

For Importers:

- Login to CamelONE™ Trade Finance portal and select DBS for your trade financing application
- Upon successful application, receive a copy your LC and import documents digitally via NTP

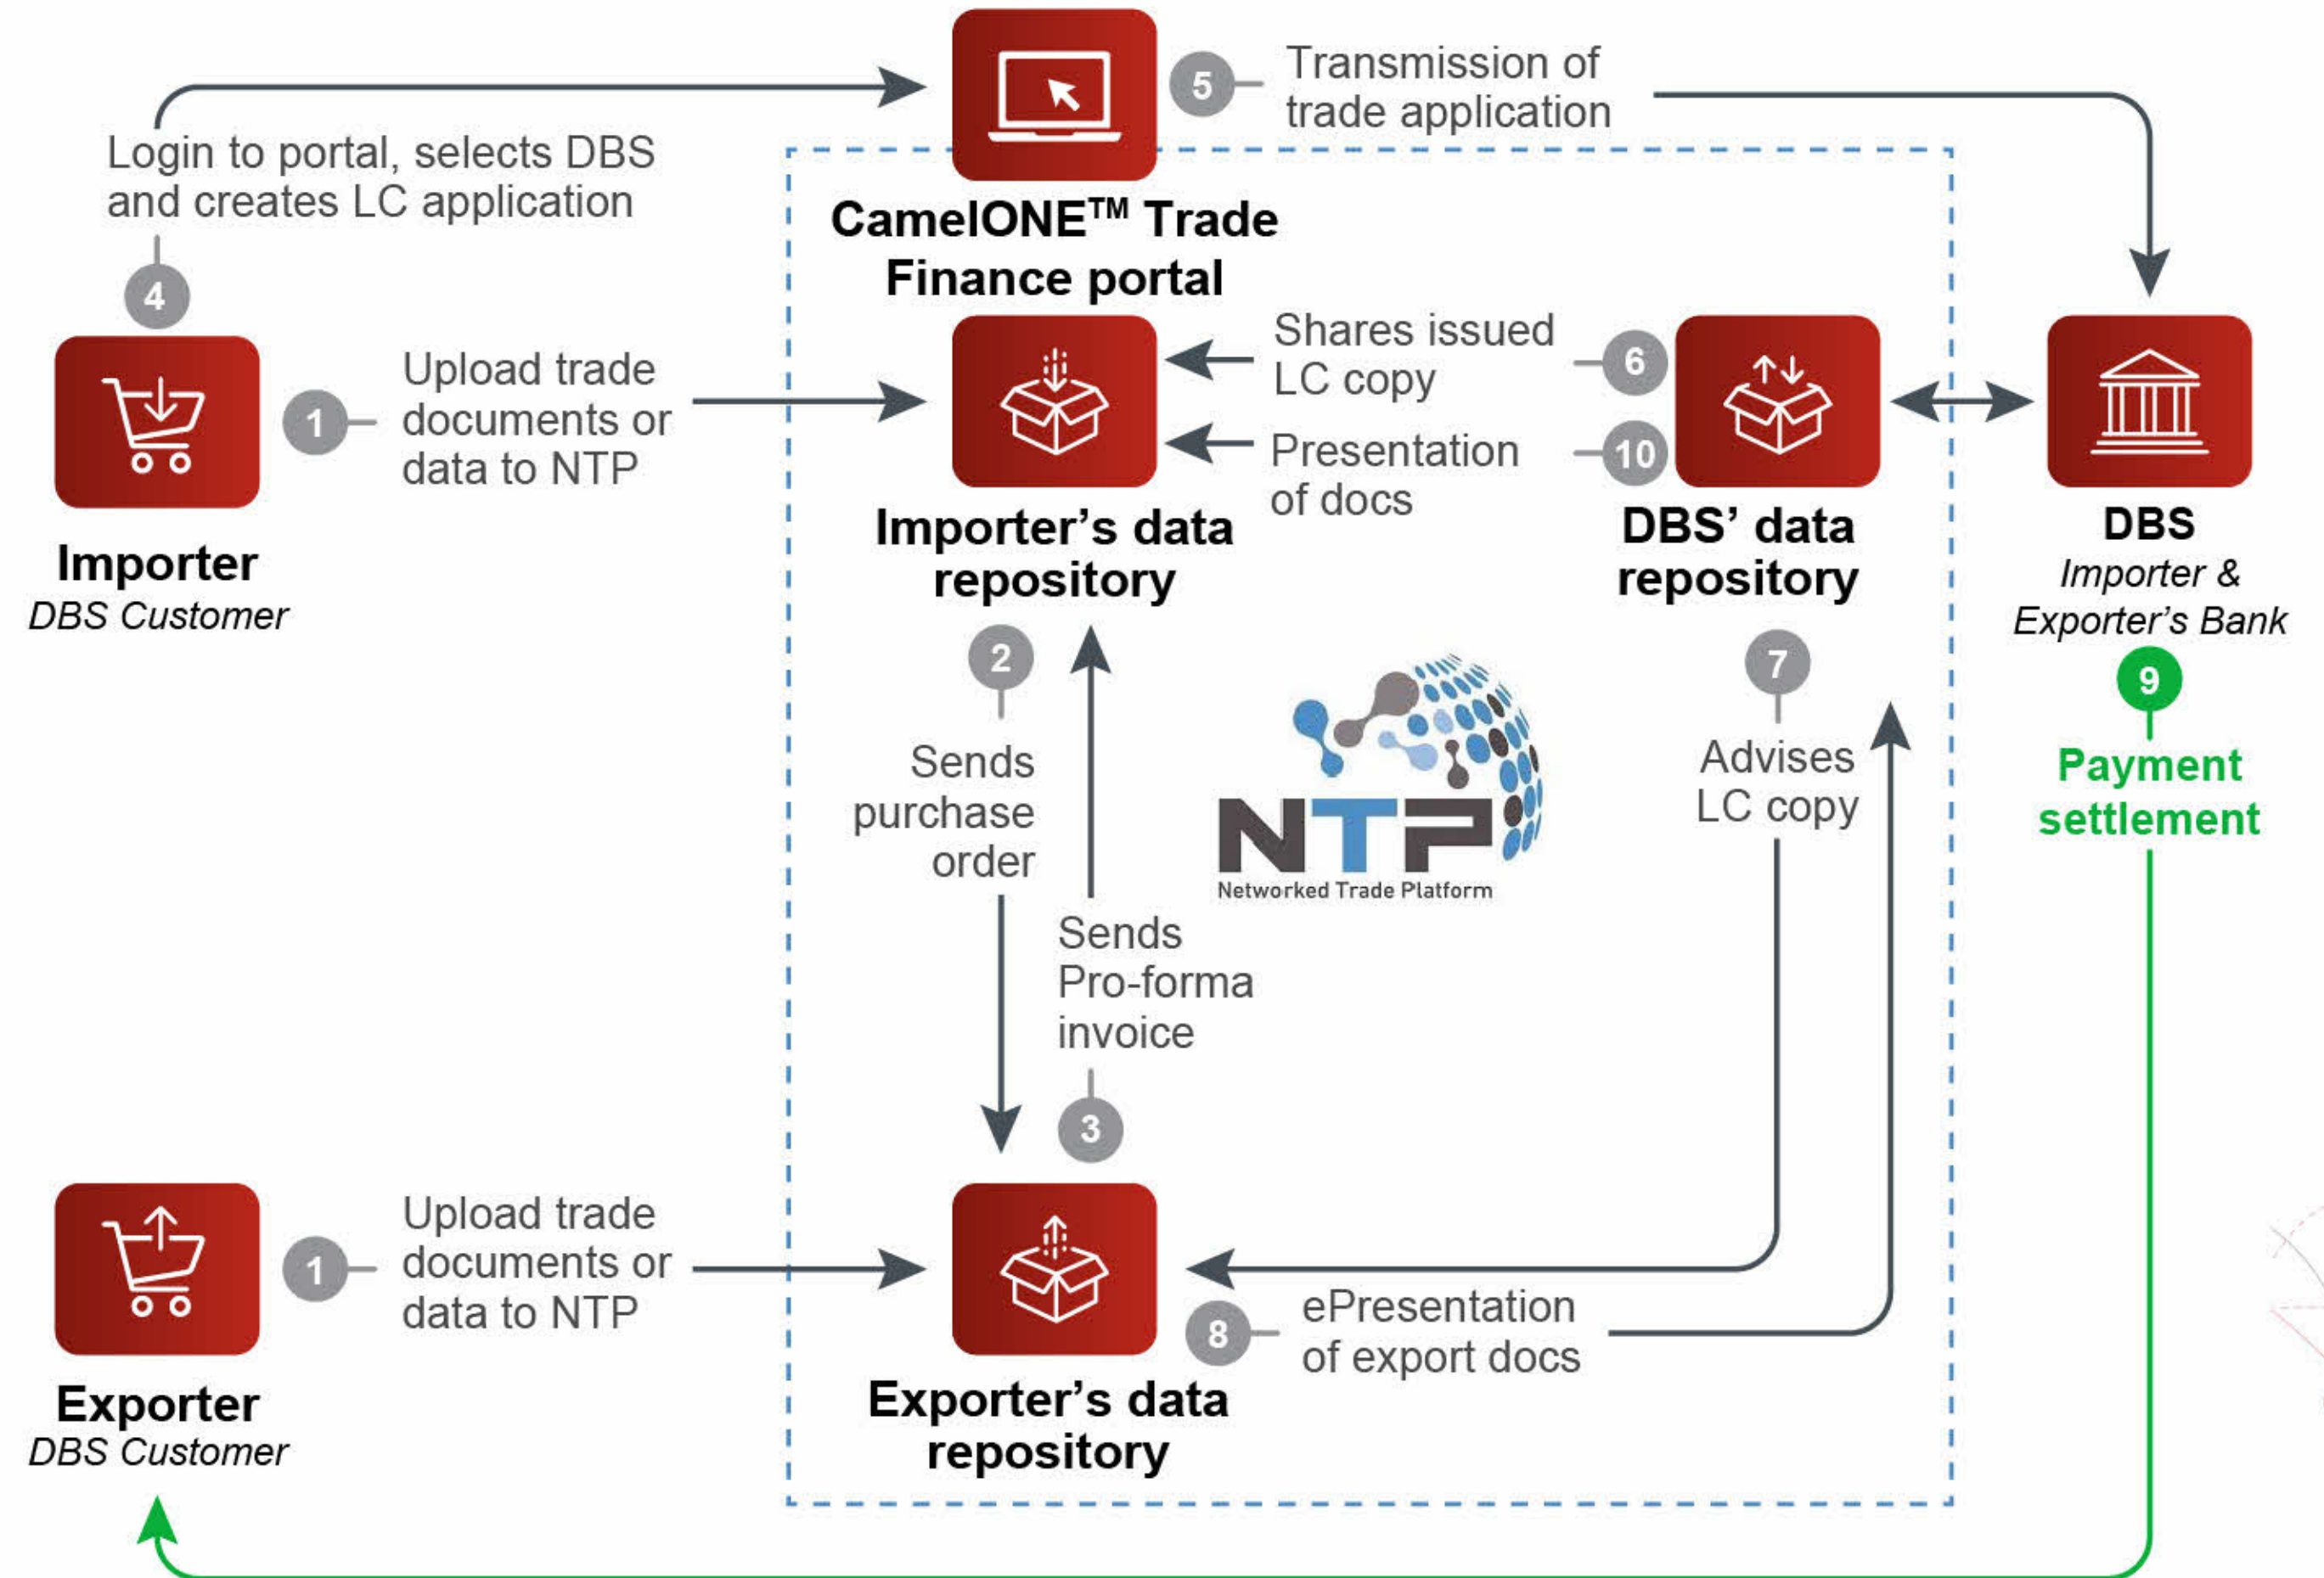

For Exporters:

- Receive LC Advising and conduct export document presentation digitally via NTP

How it helps you

- **Improves operational efficiency:** removes manual paper processes from application to settlement
- **Faster** payment settlement
- **Secured and easier way** to exchange trade documents
- **Greater visibility** with **real-time tracking** of transactions and centralised reconciliation
